ISO TC 91

**ISO 456:1973, Surface active agents -- Analysis of soaps -- Determination of free caustic alkali** ISO TC 91

The determination may be carried out in two different ways by the ethanol method or the barium chloride method. In the first case the soap is dissolved in neutralized ethanol, and the free caustic alkali is titrated with an ethanol solution of hydrochloric acid. The second way includes precipitating of soap and carbonate with barium chloride and determining of the residual alkalinity of the solution, representing the alkalinity of the free potassium hydroxide. This title may contain less than 24 pages of technical content.
