Barrie D. Dunn

Materials and Processes: for Spacecraft and High Reliability Applications (Springer Praxis Books)

Barrie D. Dunn

The objective of this book is to assist scientists and engineers select the ideal material or manufacturing process for particular applications; these could cover a wide range of fields, from light-weight structures to electronic hardware. The book will help in problem solving as it also presents more than 100 case studies and failure investigations from the space sector that can, by analogy, be applied to other industries. Difficult-to-find material data is included for reference. The sciences of metallic (primarily) and organic materials presented throughout the book demonstrate how they can be applied as an integral part of spacecraft product assurance schemes, which involve quality, material and processes evaluations, and the selection of mechanical and component parts.

In this successor edition, which has been revised and updated, engineering problems associated with critical spacecraft hardware and the space environment are highlighted by over 500 illustrations including micrographs and fractographs. Space hardware captured by astronauts and returned to Earth from long durations in space are examined. Information detailed in the Handbook is applicable to general terrestrial applications including consumer electronics as well as high reliability systems associated with aeronautics, medical equipment and ground transportation. This Handbook is also directed to those involved in maximizing the reliability of new materials and processes for space technology and space engineering. It will be invaluable to engineers concerned with the construction of advanced structures or mechanical and electronic sub-systems.

bility of new materials and processes for space technology and space engineering. It will be invaluable to engineers concerned with the construction of advanced structures or mechanical and electronic sub-systems.

From reader reviews:

Maria Jennings:

What do you with regards to book? It is not important along? Or just adding material when you require something to explain what your own problem? How about your extra time? Or are you busy individual? If you don't have spare time to complete others business, it is make you feel bored faster. And you have time? What did you do? Every individual has many questions above. They have to answer that question simply because just their can do which. It said that about reserve. Book is familiar on every person. Yes, it is suitable. Because start from on jardín de infancia until university need this particular Materials and Processes: for Spacecraft and High Reliability Applications (Springer Praxis Books) to read.

Mary Perez:

As people who live in the particular modest era should be up-date about what going on or info even knowledge to make these people keep up with the era that is always change and make progress. Some of you maybe can update themselves by examining books. It is a good choice for you but the problems coming to a person is you don't know which one you should start with. This Materials and Processes: for Spacecraft and High Reliability Applications (Springer Praxis Books) is our recommendation so you keep up with the world. Why, since this book serves what you want and want in this era.

James Atkinson:

Reading a book to become new life style in this calendar year; every people loves to study a book. When you examine a book you can get a lot of benefit. When you read books, you can improve your knowledge, since book has a lot of information into it. The information that you will get depend on what forms of book that you have read. If you want to get information about your examine, you can read education books, but if you act like you want to entertain yourself you can read a fiction books, these kinds of us novel, comics, in addition to soon. The Materials and Processes: for Spacecraft and High Reliability Applications (Springer Praxis Books) provide you with a new experience in reading a book.

Julie Gibson:

It is possible to spend your free time to learn this book this publication. This Materials and Processes: for Spacecraft and High Reliability Applications (Springer Praxis Books) is simple to develop you can read it in the park, in the beach, train and soon. If you did not have much space to bring the actual printed book, you can buy the actual e-book. It is make you easier to read it. You can save often the book in your smart phone. So there are a lot of benefits that you will get when one buys this book.
