The Foundations of Physical Reality Richard D. Stafford

This book presents a breakthrough in representation of modern physics which removes all conflicts between quantum mechanics and relativity and, at the same time, unifies the four forces. It is a presentation of modern physics directly deduced from the necessity of internal consistency alone. The deduction yields a fundamental equation which requires the validity of Newtonian classical mechanics, Schrodinger's wave mechanics, Maxwell's electrodynamics and the Lorentz transformations together with transformations appropriate to accelerated frames. The result is based on nothing more than simple internal consistency of the representation. The deduction also yields a rather simple explanation of the necessity of a gravitational force. The presentation is a totally new way of viewing the universe which opens doors to speculation beyond anything previously conceived and requires no education beyond advanced calculus .
