Standards for a Patient Blood Management Program, 1st edition AABB (American Association of Blood Banks)

The Standards for a Patient Blood Management Program (PBM Standards) can help facilities that are implementing or enhancing patient blood management efforts to have a solid foundation for maintaining and optimizing the care of patients who may or may not need transfusion. Like other AABB standards, the requirements in this edition include over-arching quality standards as well as specific technical standards all firmly grounded in a quality systems framework. Unlike other AABB standards, the requirements in this edition are organized to reflect the wide range of clinical services offered by different hospitals. The PBM Standards acknowledges three distinct PBM program activity levels that reflect the functions an individual facility may perform.

Key features:

The content was developed by a committee of experts working in the PBM field, including laboratory and medical professionals as well as quality experts.

The content was reviewed and modified based on input from other professionals involved in PBM, representatives from other organizations with an interest in PBM, and the public.

The PBM Standards are distinct from, but can be used in concert with, Standards for Blood Banks and Transfusion Services and Standards for Perioperative Autologous Blood Collection and Administration.

Because there is no effective date for this first edition, facilities have some flexibility in advancing toward full compliance, in anticipation of becoming accredited.

Record-keeping requirements for PBM program activities are clearly identified, and details on what those records must contain are provided.

(2014, AABB, 33 pages)
