LTE Security (NSN/Nokia Series) Dan Forsberg, Günther Horn, Wolf-Dietrich Moeller, Valtteri Niemi

A concise, updated guide to the 3GPP LTE Security Standardization specifications

A welcome Revised Edition of the successful *LTE Security* addressing the security architecture for SAE/LTE, which is based on elements of the security architectures for GSM and 3G, but which needed a major redesign due to the significantly increased complexity, and different architectural and business requirements of fourth generation systems. The authors explain in detail the security mechanisms employed to meet these requirements. The specifications generated by standardization bodies only inform about how to implement the system (and this only to the extent required for interoperability), but almost never inform readers about why things are done the way they are. Furthermore, specifications tend to be readable only for a small group of experts and lack the context of the broader picture. The book fills this gap by providing first hand information from insiders who participated in decisively shaping SAE/LTE security in the relevant standardization body, 3GPP, and can therefore explain the rationale for design decisions in this area.

- A concise, fully updated guide to the 3GPP LTE Security Standardization specifications
- Describes the essential elements of LTE and SAE Security, written by leading experts who participated in decisively shaping SAE/LTE security in the relevant standardization body, 3GPP
- Explains the rationale behind the standards specifications giving readers a broader understanding of the context to these specifications
- Includes new chapters covering 3GPP work on system enhancements for MTC, plus application layer security in ETSI TC M2M and embedded smart card in ETSI SCP; Security for Machine-type Communication, Relay Node Security, and Future Challenges, including Voice over LTE, MTC, Home base stations, LIPA/SIPTO, and New Cryptographic Algorithms

Essential reading for System engineers, developers and people in technical sales working in the area of LTE and LTE security, communication engineers and software developers in mobile communication field.

From reader reviews:

Phyllis Smith:

Book is to be different for each and every grade. Book for children until eventually adult are different content. We all know that that book is very important for us. The book LTE Security (NSN/Nokia Series) was making you to know about other know-how and of course you can take more information. It is extremely advantages for you. The book LTE Security (NSN/Nokia Series) is not only giving you far more new information but also for being your friend when you experience bored. You can spend your own spend time to read your reserve. Try to make relationship with the book LTE Security (NSN/Nokia Series). You never feel lose out for everything in case you read some books.

Troy Cochran:

Do you among people who can't read satisfying if the sentence chained within the straightway, hold on guys that aren't like that. This LTE Security (NSN/Nokia Series) book is readable by you who hate those perfect word style. You will find the info here are arrange for enjoyable reading through experience without leaving also decrease the knowledge that want to give to you. The writer involving LTE Security (NSN/Nokia Series) content conveys thinking easily to understand by many people. The printed and e-book are not different in the written content but it just different by means of it. So , do you even now thinking LTE Security (NSN/Nokia Series) is not loveable to be your top collection reading book?

Jeremy Bedford:

The reserve untitled LTE Security (NSN/Nokia Series) is the e-book that recommended to you to learn. You can see the quality of the guide content that will be shown to anyone. The language that publisher use to explained their ideas are easily to understand. The article author was did a lot of research when write the book, hence the information that they share for you is absolutely accurate. You also could get the e-book of LTE Security (NSN/Nokia Series) from the publisher to make you considerably more enjoy free time.

Tim Andrus:

Reading can called imagination hangout, why? Because when you are reading a book specifically book entitled LTE Security (NSN/Nokia Series) your thoughts will drift away trough every dimension, wandering in each and every aspect that maybe mysterious for but surely can become your mind friends. Imaging every single word written in a reserve then become one contact form conclusion and explanation that maybe you never get previous to. The LTE Security (NSN/Nokia Series) giving you one more experience more than blown away your head but also giving you useful data for your better life on this era. So now let us demonstrate the relaxing pattern at this point is your body and mind will probably be pleased when you are finished reading it, like winning a. Do you want to try this extraordinary shelling out spare time activity?
