Organization of the Extracellular Matrix: a Polarization Microscopic Approach Laszlo Modis

This book describes analysis techniques and results of topics such as physical backgrounds, chemical backgrounds, and principal methods of topo-optical reactions used in ultrastructure research of the ECM; orientation patterns of GAGs and collagen in different tissues/cartilage, cornea, kidney basement membranes, and skin; factors involved in the formation of submicroscopically ordered matrix structure; and cell-matrix interactions, including cytoskeleton-cell-membrane-matrix relationships. A summarization of the advantages and limitations of polarization microscopy compared to electron microscopy in ultracellular research is also included. Cell biologists, histologists, pathologists, and biochemists in connective tissue research will find this book to be an invaluable reference tool.
